Day 47

✦ Components in UI design:

Component is any part of design that can be logically grouped which is thought of as a standalone and can be reused.

Steps of building component

Step 1 : Start small, build one
component at a time

↓

Step 2 : Combine a components to
create a more complex one

↓

Step 3 : Build interface using these
individual and combined
components

* A design system is a set of reuable pre made design components and patterns that can be used to design products at scale similar to a brand style guide. They contain rules and best practice behaviors for design components

Most successful design & system frequently have following features :
1) Design guidelines
2) Design pattern library
3) A UI kit or component library
4) Process design guideline.
