Day 18

⭐ Workflow :

Depend on
1) Team size
2) Culture
3) Product type

⭐ Head   cd .git
       cat HEAD

✳ Diff commands :

Git status   → which files were changed

Git diff   → What changes are made

Diff is used to make comparisons against files on our local repository. It can also be used against commits and against branches

✳ git blame command is used to look at changes of a specific file and show the dates, time and users who made the changes.

git blame <date> <file>

message format
48967298	Commit ID/Hash
(Developer 1)	Author
2023-02-27	Date
16:48:30	Time
